

Aims & Purpose

- Wouldn't it be amazing if everyone was flourishing in their lives, whether at home or at work, anywhere in the world? Wouldn't it be fantastic if every time we built or designed something it didn't destroy our planet but actually had a positive impact? Wouldn't it be wonderful if our children could learn more easily, our families heal quicker in hospital, and we also enjoy our worklife?
- Biophilic Design isn't a magic bullet, but it is definitely a magic brush. A brush with which everyone has the ability to transform our environments so we can live our best life.
- The purpose of our magazine is to inspire this change. We want to support this exciting and growing movement of Biophilic Design, to show how everyone can bring design elements inspired by nature into our built environment to help countries, cities, families and you flourish.

The time is now

- Never before has there been such an interest in wellbeing, our climate, mindfulness, the workplace, physical and mental health as well as how we live our best lives. Our magazine builds on and supports this global interest. If you search online for "Biophilic Design" you will see hundreds or articles not just academic but also mainstream media. The world has caught on to this vital design trend.
- Our podcast series with researchers, thoughtleaders, architects, environmentalists, psychologists, acousticians and interior designers now reaches 30,000 monthly listeners.
- The time is now to celebrate a better way of building, designing, living and flourishing.

ENVIRONMENTAL CRISIS? WHAT FOOTPRINTS SHOULD WE BE LEAVING IN OUR WORKPLACE?

"The team at FOOTPRINT+ question whether the term 'crisis' is helpful and offer an interesting, maybe sobering view of how we view our historical use of fossil fuels."

Tim Pyne, Creative Director, FOOTPRINT+

At FOOTPRINT+ we try to encourage a earth's temperature. Now we have no we installed 1500 sunflowers throughout the event, grown for us by Hortus Loci. is developing fast. Visitors were invited to take them home and plant them.

Fossil Fuels have been instrumental in widespread enough yet. transporting the human race from a society ravaged by disease and hunger to one where the majority of people are adequately fed, there is leisure time, and early death is increasingly rare. When the industrial revolution started. it has improved incomparably.

Having said that, the by-product of this gases into the atmosphere which have and important. caused, and are causing, a rise in the

more optimistic view; last year's launch option but to transfer from a reliance on slogan was 'Goodbye Oil, Hello Sun', and fossil fuels to the use of solar, wind and tidal power, and the technology to do this

> The use of renewable energy will improve people's quality of life, but this is not

Designers have the responsibility to put scientific advances on carbon reduction into general use, and to do this efficiently they need the most advanced knowledge available. That is what we launched the quality of life on earth was low; now FOOTPRINT+ to facilitate and it has an obvious and urgent role to play. We shape the content along with those who attend the event to ensure each edition of the has been the emission of greenhouse FOOTPRINT+ event is different, exciting

How Biophilic Design creates Sustainable Environments

Biophilic Design is a growing trend that incorporates natural elements into the home or office to create a sustainable, ecofriendly environment. It reduces carbon emissions, boosts energy efficiency, and improves health and wellbeing by purifying the air and providing access to natural light and fresh air. Incorporating natural materials, plants, and distinctive shapes, Biophilic Design can help reduce the risk of flooding and increase biodiversity.

Is Biophilic Design always relevant

Biophilic Design is fast becoming one of the most influen elements in interior design and architecture. Studies hav shown that there is a significant improvement in personal being, productivity, and creativity when people are surrounded by natural elements like plants and greenery hospitality industry even sees people spending 25% mo when these design principles are employed. The Benhol Group uses plants creatively to create biophilic interiors, demonstrating the relevance and positive benefits of incorporating nature into modern spaces.
